

Carriage Rollers

Carriage Rollers - Carriage rollers are particularly designed bearings that are used on lift masts to be able to help them perform in challenging environmental surroundings. Lift masts are frequently subjected to shocks, oscillations, high dynamic and vibrations and static loads. This apparatus is often exposed to environmental influences such as heat, dust, cold, contamination, aggressive ambient air and moisture. Hence, the guidance arrangements of lift masts have to be particularly strong and have a particular high load carrying capacity.

So as to help compete in numerous different environmental surroundings, carriage rollers were designed for lots of lift masts. While having the ability to handle a specifically high load carrying capacity, these bearings provided a cost-effective operational security for the lift masts' guidance arrangements.
