

## Fork Positioner for Forklifts

Forklift Fork Positioner - A fork positioner is actually an apparatus made out of high quality materials designed to be able to endure the most demanding operations and work environments. This particular piece of equipment could enable the person driving to be able to control the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load in order to facilitate more accurate carrying and placement in a faster and more effective manner.

The fork pocket is rather unique and enables the person operating it to safely swing the blades into position without any worry of destroying the positioning cylinders. This could allow the operator the choice to be able to perform simultaneous or independent fork movement, depending on the requirements of the job. For most lift trucks with non-OEM carriages, complete carriages are necessary. Standard OEM carriages could be transformed into blade positioners on available units.
