

## Swing Carriages

Swing Carriage - The load capacity of a forklift jib has a maximum of approximately 1935 lbs to 6000 lbs on either the retracted or extended positions range. You might need to check with a material handling specialist concerning the particular restrictions of your lift truck application. The load capacity ratings are really used for the jib itself and not the forklift or the maximum load which could be moved securely making use of a particular lift truck. It is important to keep in mind that at any time when whichever accessories like for instance a forklift jib are fitted to the lift truck, the new center of gravity created by the attachment would lessen the overall lift capability of the forklift. There are guidelines accessible that offer details on how to correctly estimate these load limits.

Prior to the use of whatever forklift jib, be sure that the hooks and shackles are properly secured to the lift truck. Make sure and also double check that the pins are tight. It is very important that the weight calculations are properly made and double checked. Keep in mind to take into consideration the truth that rated capacities occasionally decrease each time the boom is in an elevated position, when the boom is extended with telehandlers or even whenever the mast is tilted forward.

Vital pointers each time you are using an adjustable jib is not to ever pull a load using this kind of attachment. These types of attachments are only meant for vertical raising. What's more, refrain from letting the load sway. Utilize extreme caution each time a load is lifted to prevent tipping over the truck.
